EXPERIENCE

Freelance Full Stack Developer

Jan. 2025 – Mar. 2025

Aurora Digital Project – Administrative Platform

Remote

- Developed an administrative dashboard using Laravel, Vue.js, MySQL, and Bootstrap for internal management of clients, products, and reports.
- Created a REST API with authentication, validations, controllers, services, and backend business rule organization.
- Implemented a responsive interface with reusable components and full integration between frontend and backend.

Freelance Frontend Developer

Jul. 2025 – Sep. 2025

Nexora Systems – Responsive Web Application

Remote

- Developed frontend features in Vue.js with a focus on responsive pages, reusable components, and REST API consumption.
- Created login screens, dashboards, listings, forms, and detail pages following usability best practices.
- Refactored components, organized routes, and improved code readability for future maintenance.

Barboy

Jun. 2024 – Jun. 2025

Costa Crociere

International Experience

- Worked in a high-demand multicultural environment, supporting bar operations and customer service.
- Organized inventory, restocked supplies, assisted the bar team, and maintained quality and cleanliness standards.
- Developed interpersonal communication, fast adaptation, and the ability to work under pressure in an intense operational routine.

Barista

Aug. 2025 – Apr. 2026

Piccole Bonta

Guarapuava, PR

- Prepared coffee and beverages, provided customer service, and supported the daily operations of the coffee shop.
- Organized the work environment, controlled supplies, and maintained quality in customer service.
- Developed responsibility, agility, attention to detail, and direct communication with customers.

PROJECTS

Vestock | *Laravel, PHP, MySQL, Vue.js, JavaScript*

2026

- Economic management system for thrift stores, focused on tracking items, entries, exits, costs, and sales.
- Designed a database model with entities such as items, suppliers, consignments, sales, and financial transactions.
- Planned an API REST architecture with authentication, business rules, and layered backend organization.

EcoLink | *Laravel, PHP, MySQL, Leaflet.js, TailwindCSS*

2025

- Web platform for viewing and registering waste and recyclable material collection points.
- Developed an organized REST API using controllers, services, repositories, requests, models, and interfaces.
- Integrated maps to improve access to disposal points and encourage sustainable practices.

EcoLink Flutter | *Flutter, Dart, Firebase, REST API, Geolocation*

2025

- Mobile application for locating waste disposal points near the user.
- Integrated with a Laravel API, Firebase authentication, cloud database, and geolocation features.
- Organized the project using layered architecture and state management with Provider.

InstaClone | *Vue 3, Vite, JavaScript, SCSS, Docker*

2026

- Mobile-first web application inspired by Instagram, including authentication, feed, stories, profile, and post creation.
- Built an interface based on reusable components, Composition API, and modular structure.
- Organized folders by responsibility, including components, views, layouts, stores, services, and router.

ChatbotLangchain | *Python, LangChain, GroqAPI, Llama 3, dotenv*

2025

- Python chatbot using LangChain and GroqAPI for integration with language models.
- Implemented modular prompts, in-memory message history, and secure environment variable loading.
- Explored generative AI, LLMs, and the development of conversational applications.

TECHNICAL SKILLS

Languages: PHP, JavaScript, Python, Dart, Java, SQL, HTML, CSS, C, C++

Frameworks: Laravel, Vue.js, Flutter, Vite, TailwindCSS, Bootstrap

Developer Tools: Git, GitHub, Docker, Composer, NPM, VS Code, Linux, MySQL, Firebase

Libraries and Technologies: LangChain, GroqAPI, Leaflet.js, Provider, REST APIs, SCSS, Bootstrap Icons

Courses: Game Development – Danki Code; Frontend – 3C Plus; Electrical Technician Program
